

Euroviti

your **special partner**

packaging

Euroviti Srl, specialises in the supply of four main product lines:

- **standard screws, nuts and bolts (controlled and selected on a 100% basis);**
- **special turned elements and cold formed elements, produced according to customer drawings;**
- **tools and protection articles;**
- **assembly kits and customized packaging.**

In the last years Euroviti has been developing its line of packaging, thanks to the use of highly innovative machinery able to pack automatically kits consistent of up to six different types of articles. In every single pack it is possible to include findings or other items according to different customer requirements. A PLC guarantees the storage of configurations and settings of product kits. The efficiency of this line depends on the amount of items composing a single kit: we can make an average of 700 packs per hour, with peaks of 1300/1400 packs per hour. According on the quantities and the dimensions of the inserted kit articles, we can offer three different sizes of packs:

	Width	Lenght
Type of size A	170 mm	up to 300 mm
Type of size B	125 mm	up to 300 mm
Type of size C	100 mm	up to 300 mm

On customer's request it is possible to diversify and personalize each kit, printing on it either simple descriptions or logos.
