

Euroviti

your **special partner**

selection and control

Since 1972, the year of its founding, Euroviti S.r.l. has always been oriented towards the achievement of the total satisfaction of its clients. The modern structure of the company is ready to adapt itself to the continuous and demanding requests of either the local or the international market.

Nowadays, more and more fields adopt the policy of the "zero discard" and prefer working with partners that not only share the same point of view but also adapt their technology, through appropriate investments, to fully fulfil the requirements of their clients.

Thanks to large investments aimed at enhancing the testing tools for goods upon arrival (profile projectors, profilometers, hardness testers, micro hardness testers, microscopes, stereoscopes, magnetoscopes, machines for tensile testing and spectrometers) Euroviti has directed its strategy to **100% control and selection** of the goods through visual systems.

Practically, before shipping the orders to the clients, the articles are accurately controlled and those which are found unsuitable to the standards are eliminated.

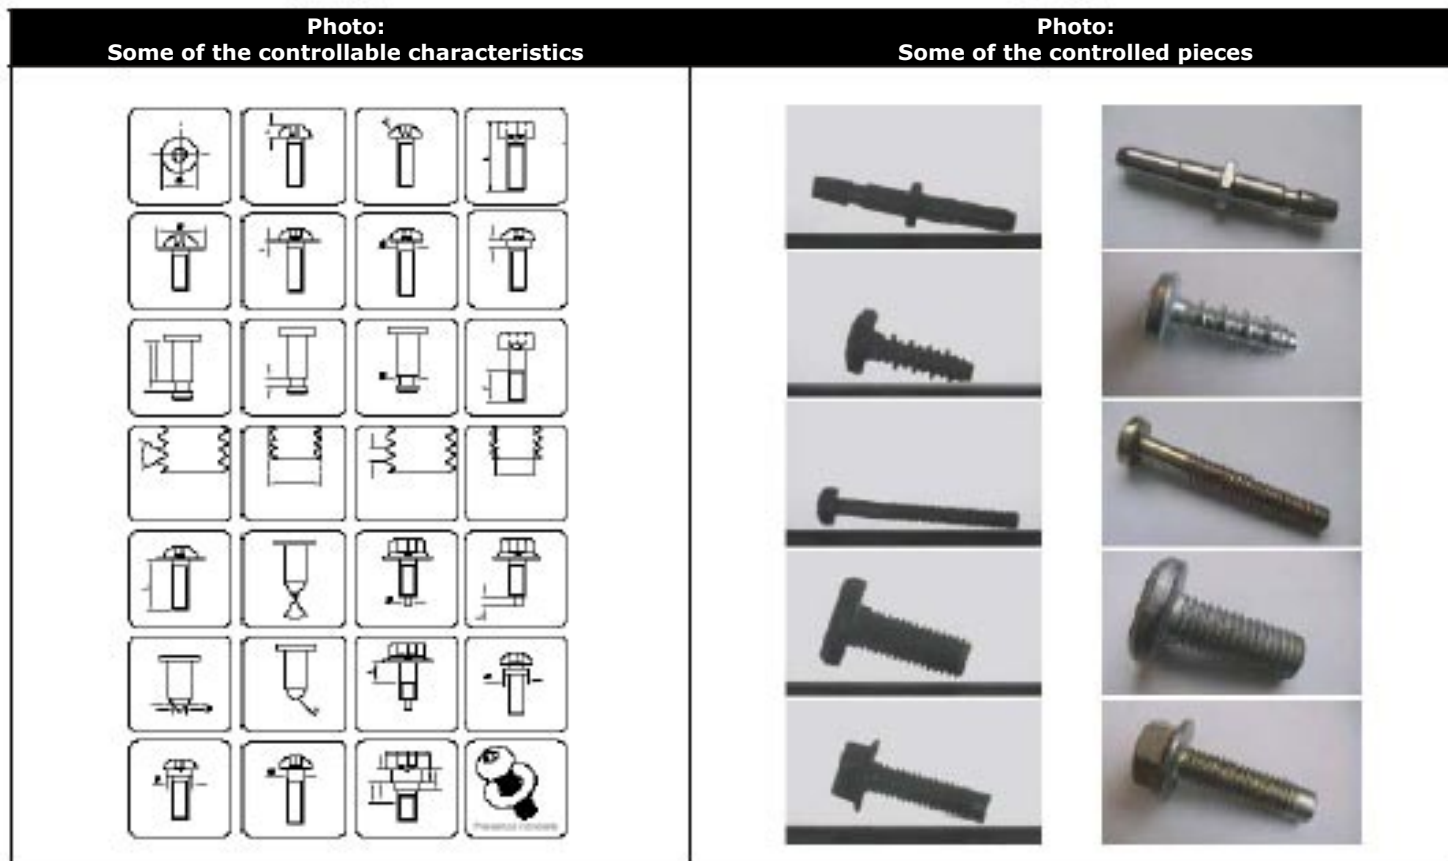

A highly sophisticated computer system checks all the items and enables the elimination of foreign parts and of those goods which prove to be faulty or do not have fully conformity. Such accurate inspections are essential for items that will be set up by means of automatic systems.

Thus, it is possible to eliminate residues coming, for example, from the galvanizing process, to separate screws having different lengths or diameters.

A 100% selection is essential as well for items estimated as critical:

Here are the main characteristics:

- shank diameter : between 3 and 12 mm;
 - shank length: between 10 and 100 mm;
 - head diameter: between 1.5 and 12 mm;
 - head height: between 1.5 and 12 mm
- Selection capacity: up to 50,000 pieces/hour

In case you are interested in receiving more information about our activity , we are glad to meet you to present you a more complete version of the selection and quality services.
